

RA opportunities in the Memory and Perception in Schizophrenia (MAPS) Lab: we study visual attention and memory in people who have a diagnosis of schizophrenia, as well as people without a psychiatric illness using EEG. Research assistants in this lab split their time between collecting data for different research projects, reading journal articles, learning Matlab programming skills, and various other research support activities such as scheduling participants. Two research assistant positions are available at the beginning of each semester, and there is a minimum 2-semester commitment (i.e., interested individuals would need to be available for the Spring 2019 and Summer 2019 terms).

If interested: Please send an e-mail to Laura Crespo (lpc45@ubhc.rutgers.edu) to let her know that you are interested in being on an e-mail contact list. As soon as applications are open for the upcoming semester, which will be January 22nd, she will send you an e-mail with (1) a short document describing research in the lab in more detail, and (2) an application form that you will complete and return.
