

Looking for participants to take part in a series of experiments at the Center of Alcohol Studies at Rutgers.

The research involves the study of cognition and emotion in addiction. We also measure physiological responses (ECG) and interoception, your ability to feel your own body.

All participants receive an economic compensation for their time at the usual rates.

We have currently 3 experiments running, each focusing on a different paradigm and with different inclusion criteria. If you are interested you could potentially take part in all 3 of them.

Below is a description of each experiment and a link to sign up:

Alcohol Administration (for over 21 Y.O.):

We are seeking participants for a study in which small doses of alcohol will be administered. As part of the experiment you will then complete a series of attentional and cognitive tasks performed over two laboratory sessions. Each session lasts 2 hours and 20 minutes and you will be compensated for your time @ \$7/hour for about 4h20 total, including breaks and recovery time.

You must be 21 years old or older and healthy to take part in this experiment. Please complete the following short online survey to confirm your eligibility and book an appointment:

[https://rutgers.ca1.qualtrics.com/jfe/form/SV\\_6kYmBBa5ZPyBDfL](https://rutgers.ca1.qualtrics.com/jfe/form/SV_6kYmBBa5ZPyBDfL)

All your data will be treated confidentially. If you have any questions, please contact Shahriar for more information: [sj202@rutgers.edu](mailto:sj202@rutgers.edu)

Emotion and interoception:

We are seeking participants for a study on how physiological responses and the perception of those internal changes can alter emotional experiences. You will be compensated for your time (Approximately 60 minutes) with a \$7 amazon gift card.

You must be between the ages of 18-30 to participate and you must not be under any pharmacological treatment and have no history of cardiovascular disease or abnormality . You must also not be under treatment or diagnosed for any mental disorder in the past two years. You must have normal or corrected to normal vision. Please complete this short survey to confirm your eligibility, get more information, and book an appointment:

All your data will be treated confidentially. You can contact Anisha Prasad for more information on the experiment: [ap1044@gsbs.rutgers.edu](mailto:ap1044@gsbs.rutgers.edu)

Cognition and cardiac processing:

We are seeking participants for a study on how mental stress affects cardiac function.

During this experiment we will monitor your physiological state and you will perform a series of tasks involving breathing at a certain pace and memorizing letters and numbers

You will be compensated for your time (approximately 45 minutes) with a \$5 Amazon Gift Card or with Sona credits

You must be between the ages of 18-30 to participate and you must not be under any pharmacological treatment and have no history of cardiovascular disease or abnormality . You must also not be under treatment or diagnosed for any mental disorder in the past two years. You must have normal or corrected to normal vision. Please complete this short survey to confirm your eligibility, get more information, and book an appointment:
