

Course: 830:311 *Conditioning and Learning*, Fall 2012 (index 07313)

Day, Time, Location: T,Th, 3:20-4:40, LSH A143

Instructor: Dr. Louis Matzel (Office hours: M 1:00-3:00, or by appointment, or if you can catch me)
Busch Psychology, Rm 313 phone: 848/445-5940 email: matzel@rci.rutgers.edu

Book: Domjan, M., *The Principles of Learning and Behavior*, 6th ed. (Our bookstore will carry a custom edition [it will say something like "Rutgers University 6th Edition"] that does not include an active learning section or a hard cover. This custom edition will save you about \$40. However, if you have access to the regular edition, that will work fine. Also, my lectures make only loose contact with the book (the book provides background info, but the tests are drawn *only* from material in the lectures), thus older editions of Domjan (all the way back to even the 3rd edition) will also suffice. In the end, the cheapest book that you can find will be fine.

TA: Bruno Sauce, sauce.bruno@rutgers.edu Office hours: M 12:00-1:00

The TA's primary function is to make your exams available for you to review. He knows this stuff and may be able to help you with the material, but since I am the guy who makes the exams and assigns the grades, it's probably best if you see me with any questions about the material. Throughout the semester, the TA will have your exams. If you want to look at your exams (and you *should*), you **MUST** see the TA, then you can see me with any questions that you have.

Final Exam Time: Dec 14, 2012: 8:00 AM - 11:00 AM

Description: This course is as a survey of the processes that underlie the acquisition, storage, and expression of learning in animals (including humans). The acquisition of knowledge (i.e., learning) pervades every aspect of our lives, influencing our thoughts and behavior in sometimes intuitive and in other times perplexing ways. As psychologists, we must understand these learning processes if we are to understand the complexity of behavior. Under most conditions, learning cannot be directly observed (owing to its being a mental *process*). Consequently, to study learning we use behavioral measures from which we *infer* that learning has occurred. For this purpose, we will often study nonhuman animals as with these animals it is possible to control behavior in an organized way. For the purposes of this course, we will assume that species differences (e.g., between human and nonhuman animals) are quantitative as opposed to qualitative, and as such, the general processes underlying learning in one species will apply to other species. Do not expect each of the *behaviors* that we discuss to have a direct analog in human behavior (just look at the attached videos!). For the most part, behaviors are used as tools to study mental processes, and the behaviors may not be interesting in themselves. This is a *critical* distinction, as those who fail to recognize it will often make the mistake of concluding that the behaviors we discuss throughout this course have no direct analog in human behavior and will quickly become bored. It's the *process* that matters!

I have arranged the course to cover nine topic areas that are of fundamental interest to modern learning theorists (and to me) and which in total provide a broad overview of the sometimes narrow issues covered in your text. While discussing each of these topics, we will introduce many related concepts. To understand the material that we cover in class, you should be familiar with the material in the book, as it provides a foundation for the lectures. **Much of what I will discuss in class does not appear anywhere in the book.** If you don't understand something in the book, or want me to discuss something in the book that I haven't covered, please ask me during class. Discussion helps us all understand the material a little better. Additionally, I can always talk to you about the material during my office hours (or any other time that you can catch me) and I respond to email when possible (but often not on the night before an exam, and *usually* not on the morning before an exam). Again though, it is a good idea to discuss things in class. Discussion means that you are thinking, and thinking will assure you a good grade.

Course requirements and grading: Very simple: three tests. The first two tests will each be worth 30% of your grade, and the final is worth 40%. The final is not cumulative, but you must understand the material from earlier in the semester in order to understand the later stuff. In a class this large, I usually restrict my exams to multiple choice, but an essay question is possible. The only time I give make-up exams is if you provide me a *written* explanation of a *verifiable* emergency. My make-up exams are given on the reading day at the start of the final exam period (sometimes falling on the day before the final exam), and are usually comprised exclusively of essay questions. If you miss an exam, it is *your* responsibility to contact *me*. Lastly, don't expect to simply memorize words or facts and do well on my exams; you need to *understand* the material, *particularly* the concepts. This later point is important; don't busy yourself memorizing what I say in class. Instead, **think about** what I say in class.

Because of an increasing tendency of students to try to persuade me to change their grade after the semester is over, let me be *very explicit*. I will give anyone as much help as they need *to prepare for tests* during the semester,

and if you need to get extra help, or want to do “extra” work (i.e., prepare more, think more, study harder...), the semester is the time for it. When the semester's over, there is *nothing* you can do to change your grade, and I will *never* let you do “extra work” to improve your grade.

You being an adult, attendance at my lectures is your choice. But again, **much of what will be covered in class is not in your textbook**, so I *highly* recommend that you come to class. This is an easy class if you pay attention. If you don't come to class, or if you sleep in class, or if you text your friends while in class, or play on Facebook while in class, you will probably do poorly. If you don't want to come to class, it is probably best not to take this (or any) course. I should also mention that I have in the past seen the *First Class Notes* and *Scarlet Notes* for my lectures. They are typically full of factual errors and misrepresentations, and in my opinion, are an *impediment* to learning. *They are NOT a substitute for coming to class.* You should be very uncomfortable using anyone else's notes as a substitute for coming to class. The bottom line is, if you make that little effort to come to class and to pay attention while you are here, you will learn a lot and get a good grade. **I also happen to think that the material is fun.** I may on one or two occasions give some extra credit for something we do in class. If you miss that class, these assignments *cannot* be made up.

<u>Topic</u>	<u>Date (all dates are tentative, and subject to change: KEEP UP!)</u>	<u>Relevant Chapters</u>
1. What are the necessary and sufficient conditions for the formation of memory? Thorndike, Pavlov, and the origins of the empirical analysis of learning and memory.	September 4	Chapters 1, 3
2. Do stimuli evoke responses or do responses require intervening cognition? Tolman, Hull, and the origins of modern learning theory.	September 18	Chapter 4
3. Processing complex stimuli and their influence on memory and behavior. Formal models of learning	October 2	Chapter 2, review Chap 4
Test 1	October 16 (tentative!!!)	
4. Instrumental learning and schedules of reinforcement	October 18	Chapters 5, 6, 7
5. Aversive control of behavior with punishment: Does it work and why? Avoidance and escape behavior.	October 30	Chapter 8, 9, 10
6. Depression and anxiety: do these disorders reflect a failure to control or predict our environment. Animal models of dementia.	November 6	Review Chapters 5, 6
Test 2	November 15 (tentative!!!)	
7. Representing space in memory; the “cognitive map”. Memory processes.	November 20	Chapter 11, 12
THURSDAY, November 22: NO class (Its Thanksgiving!)		
8. Working memory, attentional systems, and animal (that includes human) intelligence.	December 4	Review Chapter 11
CLASSES END December 12 30!!!		
Test 3: Dec 14, 2012: 8:00 AM - 11:00 AM (This could change!)		

Two Definitions of Learning (what's the difference):

"[Conditioning] is the process by which an activity originates or is changed through reacting to an encountered situation, provided that the change in activity cannot be explained on the basis of native tendencies, maturation, or temporary states."

E.R. Hilgard, 1956

"Conditioning is the learning of relations among events so as to allow the organism to represent its environment."

R.A. Rescorla, 1988

Videos that accompany lectures. You **MUST** look at all of these at the start of the semester (before the second class), then again before the appropriate lectures. They will make the procedures that we talk about in class immediately easy to understand. The numbers before each video indicate the topic for which each video is most relevant.

(NOTE: This syllabus is posted on Sakai under RESOURCES. In the online version, which can be downloaded as a Word file, you will find active links to all of these videos.)

1) Shaping a bar-press response (Trial-and-error; Thorndike's Law of Effect; operant conditioning):

<http://www.youtube.com/watch?v=4TyYX5C8uul&list=UUZGICwh60p09VER10CTn8-A&index=2&feature=plcp>

Note that the green light indicates that food has been delivered.

1) Different forms of conditioned responses to either a light or a tone paired with the delivery of food:

<http://www.youtube.com/watch?v=5WQFygY-qZM&list=UUZGICwh60p09VER10CTn8-A&index=5&feature=plcp>

Note that the red light indicates food delivery.

1) **Fear Conditioning** (15 sec tone followed by brief foot-shock. Note that the animal has previously learned to press the bar to earn food. By the 10th pairing of the tone and shock, the animal suppresses bar pressing during the tone (indicative of learned fear of the tone).

<http://www.youtube.com/watch?v=ZIZekx1P1g4&feature=relmfu>

Note that the tone is indicated by the "tone symbol" and the shock is indicated by a "lightning bolt". Observe that the shock is quite mild (i.e., the animal is clearly agitated by it, but does not exhibit any real pain).

1) Autoshaped keypeck response:

<http://www.youtube.com/watch?v=cacwAvqg8EA&list=UUZGICwh60p09VER10CTn8-A&index=10&feature=plcp>

The round light is the Conditioned Stimulus (CS) and the Unconditioned Stimulus is grain pellets (the delivery is indicated by the illumination of the food hopper).

2) Complex Maze (egocentric, i.e., self-referenced, form of operant learning):

<http://www.youtube.com/watch?feature=fvwp&NR=1&v=Ma8HCM3Z5lc>

3) Autoshaped keypeck in a long box (is this behavior "dysfunctional"?):

<http://www.youtube.com/watch?v=KnJPPaiJG6Y&feature=autoplay&list=UUZGICwh60p09VER10CTn8-A&playnext=2>

3) Habituation of a startle response (a *nonassociative* form of learning):

<http://www.youtube.com/watch?v=Kfu0FAAu-10&feature=autoplay&list=UUZGICwh60p09VER10CTn8-A&playnext=4>

3) Omission procedure imposed on an autoshaped keypeck

<http://www.youtube.com/watch?v=gE6ixMxrCuo&feature=autoplay&list=UUZGICwh60p09VER10CTn8-A&playnext=1>

Note that the bird *really* wants to peck that key!

6) Elevated Plus Maze (test for anxiety/fear/exploration)

<http://www.youtube.com/watch?v=PLcX2MbpmdY&feature=related>

7) Radial Arm Maze (*can be* guided by spatial cues, but in this case...):

www.youtube.com/watch?v=zBNoNoEB1X0

<http://www.youtube.com/watch?v=y7zQgz0vmWo&feature=related>

Note that this animal has acquired an algorithmic strategy, i.e., “turn left”, to solve the maze. The investigators that are using this maze have incorrectly assumed that the behavior reflects spatial learning.

7) Water Maze (non-spatial, visible platform):

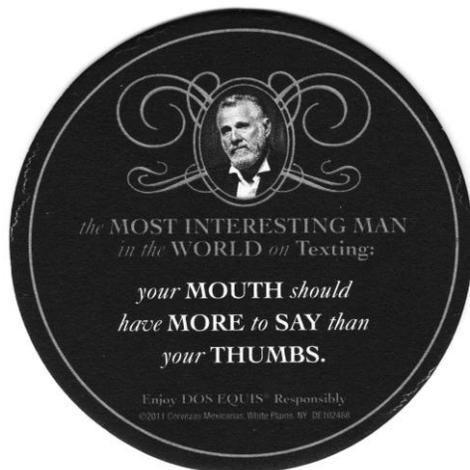

http://www.youtube.com/watch?v=MO_G5qXDZAQ&feature=related

7) Water Maze (spatial, hidden platform):

<http://www.youtube.com/watch?v=24kDZncAC9M&feature=related>

Animals have feelings too:

www.youtube.com/watch?v=nGeKSiCQkPw&feature=my_watch_later_videos&list=WL75B7AC719163AEDE

“You only live once; Make sure it’s enough.”

Lastly, here is a parable, based on a REAL CONVERSATION that took place on the morning of the final exam, Spring 2006. As with many parables, there is much to be learned...

Here's the background: I give three exams, one of which is the final that is scheduled for TODAY at 10 AM. The first two exams each had 38 questions, and grades for those exams were previously posted as percentages. The exams have been available to review now for a couple of months. My phone rings at 9:00 AM. Here's the conversation:

Caller: Uhh, I have a question about the first two exams. I got a 36% and a 44%. Are those percents [sic] out of 38 or out of 100?

me: "Percents" are out of 100.

.....LONG SILENCE.....

caller: So those aren't good grades?

me: HAVE YOU LOOKED AT YOUR EXAMS!?

caller: Well, I was planning to see the TA.

me: When were you going to do that? Your final is in 60 minutes. Have you missed any classes?

caller: Only five or six. (My translation: eight or ten or more, which means that he missed more than ONE THIRD of the material.)

.....LONG SILENCE.....

caller: So, would you say those are bad grades?

me: Generally speaking, knowing only 40% of the material is pretty bad.

caller: So do you think I'm failing?

me: As I described in class (if you were there), 60% is my cut-off for a D, so yes, you are failing.

caller: Is there any extra work I could do?

me: There's lot's of work you *could* have done [e.g., , you could have read the book, you could have studied harder, you could have talked to me about the material, you could have looked at your exams, YOU COULD HAVE COME TO CLASS MORE]. However, there's nothing *left to do* now but take the final exam.

Moral of the story: I want to help anyone who *tries*. This class will be easy for you if you come to class, pay attention, and give the material a little bit of thought while we are discussing it. If you need help, I'm in my office every day, but you have to make the effort.
